

What's The Right Valve?

What's the right valve for isolating equipment for maintenance or replacement? It's probably **NOT** the valve that you just took out...
Or the one still found in that out-of-date specification.

Tom LaGuardia, Milwaukee Valve vice president of sales and marketing, recently hosted a webinar on the specification process, discussing the importance of keeping specifications up-to-date and accurate. For some of the webinar attendees, there were some technical issues with the slide presentation, but this [LINK](#) contains the complete webinar.

The webinar only runs for about 25 minutes, including a short Q&A session.
