

An Insulating Valve Handle That Does It All? No Sweat!

INSULATOR/MS® from Milwaukee Valve is the only insulating ball valve handle that does it all – controls condensation, has reliable memory stop, and saves time since there is no need to disassemble for adjustments.

INSULATOR creates a heat-transfer barrier between piping systems and the exposed portion of a valve handle and surrounding air.

This barrier reduces or eliminates condensation, and keeps damaging moisture from infiltrating insulated systems.

Its operating range of 15° F to 250° F lets you specify multiple project types with one versatile product. INSULATOR/MS® is also certified to UL standards.

Available for all ¼" thru 2" Milwaukee Valve and Hammond Valve brass and bronze commercial ball valves, INSULATOR's unique memory stop adjusts easily with a few quick turns of a hex wrench, while competitive handles require time-consuming disassembly to perform stop adjustments.
