

VALVE JARGON BOOTCAMP

Working in the valve industry, we hear and use a lot of specialized jargon—like dead-man’s handle, nipples, worm gears, hot tap and live loading. And acronyms like ANSI, ASTM and WQA. There are a ton of terms to know, and some are downright confusing. But understanding terminology and acronyms is the first step toward proper valve selection and trouble-free installations.

Christine Vogt, Milwaukee Valve’s Customer & Field Support Services Supervisor, will take you through a short review of many of the terms that you might hear on a routine basis, and may not quite understand what they mean. And this can help remove confusion or application problems that come from a lack of proper understanding.

Learning industry jargon is an ongoing process. So stay curious and keep asking questions. Every time you learn something new, you make yourself more valuable to your customers and to your employer.

Join us on **[Tuesday, April 5th](#)** to shed light on some of these terms. The webinar will begin at 1:00 (CDT) and run for about 30 minutes, followed by a short Q&A session. A link to the registration page can be found at the **[Milwaukee Valve](#)** website today or by clicking **[HERE](#)**. Registration is required for Live or On-Demand attendance.
