

# BALL VALVE BOOTCAMP

The Milwaukee Valve webinar series is back for 2021, and we're kicking off the new season with **Ball Valve Bootcamp!**

The ball valve is one of the foundations of the commercial/industrial flow-control markets, in terms of its application versatility and superb design characteristics. While the concept of the valve has been around for more than 125 years, ball valves did not achieve commercial acceptance until about 1967. Since then, ball valves have become indispensable for residential, commercial and industrial applications, including the petroleum industry, water, electric power, chemical processing, pulp and paper, pharmaceuticals, food, steel and other fields.

Join us on [Tuesday, April 13](#), when Milwaukee Valve's commercial product manager Bob Rudman will conduct a Ball Valve Bootcamp. Bob will explain what ball valves are, their common features, designs including materials and styles, application suggestions and restrictions, standards, pressure-temperature limits, and accessories.

The webinar will start at 1:00 (CDT) and run for 30-45 minutes, including a short Q&A session following the program. A registration page will be added to the Milwaukee Valve website today.

You can register by clicking [HERE](#).
