

New Technical Bulletin – Rubber-Lined Butterfly Valves and Thermoplastic Flanges

Milwaukee Valve has issued a new Technical Bulletin on using Milwaukee Valve Iron, Rubber-Lined, Lugged Butterfly Valves in piping systems where thermoplastic flanges are used for piping connections.

Milwaukee Valve (as well as most major plastic flange manufacturers) recommends the use of a 1/8" thick full face elastomer gasket, compatible with system and media requirements.

The bulletin details installation recommendations, as well as the bolt-tightening sequence and recommended bolt torques. The Technical Bulletin can be found by clicking [HERE](#).

For more information, contact your Milwaukee Valve sales representative or your customer-service contact.
