

CHECKING OUT THE CHECK VALVE.

On Tuesday, Milwaukee Valve's Northeast regional manager Joe Myers conducted a comprehensive review of the under-appreciated Check Valve.

If you missed the webinar, you can still tune in to learn more about the varieties of check valves, and the two most important factors that can lead to potential problems – location of the check valve in relation to pumps, elbows and other components, and adequate flow to prevent disc wobble or flutter.

The webinar runs about 49 minutes, and finished with several good questions that we don't typically hear. If you missed the webinar, you can view it [HERE](#), or pass it along to others within your organization. (Registration required.) This webinar qualifies for CEU credits from ASPE, even if viewed on-demand.
