

Memory Stop Technical Bulletin

A new Technical Bulletin is available from Milwaukee Valve to cover installation of the memory stop option on gear-operated rubber-lined and high-performance butterfly valves.

Memory stops are designed to help control flow rates in applications where precision throttling is required. The Technical Bulletin explains the process for installing a locking plate-shaft into the gear operator for Milwaukee Valve butterfly valves, as well as the plate, indicator arm and limiting stud.

Milwaukee Valve butterfly valves can be ordered with a memory stop already installed, or end-users can add the option in only a few minutes.

The Technical Bulletin can be found by clicking [HERE](#)
